

# ECE2800J

## Programming and Elementary Data Structures

### **Linux**

#### **Learning objectives:**

Learn how to navigate the directory tree

Learn how to manipulate files/directory

Understand I/O redirection

And a few other useful commands (diff, apt-get...)

# Recap from last time

- Course Logistics
- Recitations,
  - From next week, Mon and Thurs. (two sessions, video recorded)
  - This week is an exception.
- TA's OH, one slot per week.
- 16.39% students “hate” programming...

# Unix

- An **operating system** supporting multitasking and multi-user
- Developed in 1969 by Ken Thompson, Dennis Ritchie, etc. from AT&T Bell Labs
- Many variants (Unix-like OS)
  - Linux
  - BSD (from UC Berkeley)
  - Solaris (from Sun Microsystems)
  - Android (from Google)
  - iOS (from Apple)
  - ...

# Linux

- A free and open source Unix-like operating system
- First released in 1991 by Linus Torvalds (borned 1969)
- Many distributions
  - Gentoo
  - Red Hat
  - Ubuntu
  - ...

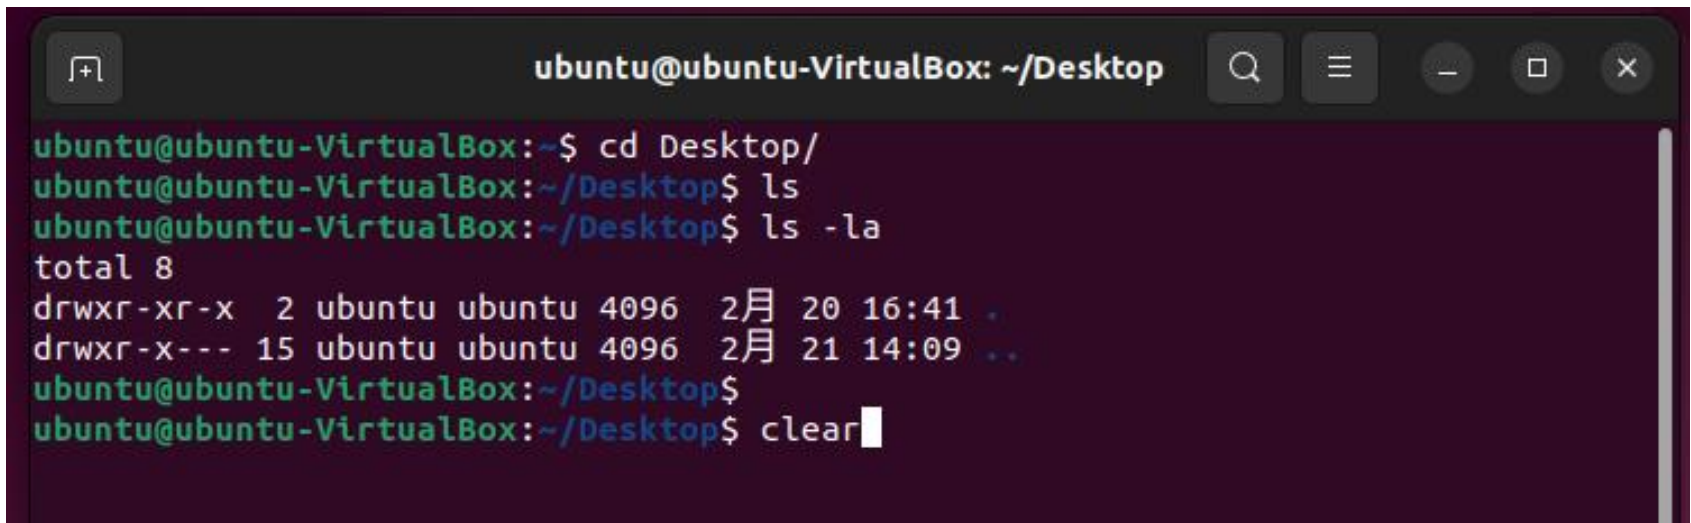

# Installing Linux

- Recommended version: **Ubuntu**
  - You can get the .iso file from:  
<http://www.ubuntu.com/download/desktop>
  - Suggest to use the latest version.
- Install it directly on your machine
- OR install it on a virtual machine on your Windows/Mac operating system.
  - Install a virtual machine such as VMware Workstation VirtualBox first.
  - VirtualBox works well and can be downloaded at:  
<https://www.virtualbox.org/wiki/Downloads>

# Using Terminal in Linux

- We type commands in the terminal in Linux

```
ubuntu@ubuntu-VirtualBox: ~/Desktop
ubuntu@ubuntu-VirtualBox:~$ cd Desktop/
ubuntu@ubuntu-VirtualBox:~/Desktop$ ls
ubuntu@ubuntu-VirtualBox:~/Desktop$ ls -la
total 8
drwxr-xr-x  2 ubuntu ubuntu 4096  2月 20 16:41 .
drwxr-x--- 15 ubuntu ubuntu 4096  2月 21 14:09 ..
ubuntu@ubuntu-VirtualBox:~/Desktop$
ubuntu@ubuntu-VirtualBox:~/Desktop$ clear
```

- Multiple ways to start a terminal
  - One simple way is to right click and choose from the shortcut menu

# Change Directory

- Basic command: `cd pathname`

- E.g., `cd /usr/bin`

typical path name format

- Special characters for directories

- root directory: `/`

- home directory: `~`

- Linux is a multi-user operating system. It is your “home directory”.

- current directory: `.`

- parent directory: `..`

# Aside: Root Directory

- Directory in Linux is organized as a tree
- The topmost directory is root directory “/”

# List Contents of a Directory

- Basic command: **ls directory**
  - e.g., **ls /home**
- **ls** (i.e., “ls” alone): list the current working directory

## Options

- **ls -l** [directory]: list in long format
- **ls -a** [directory]: list all files including the hidden files
  - Hidden files: file name begin with a dot, e.g., “.bash\_history”
- In Linux, options can be combined together.
  - “ls -la” or “ls -l -a”

what “a”  
stands for?

# Aside: Long Format of File Information

- `ls -l`

		group	modification time			
<div><div><div>-rw-----</div><div>drwxr-xr-x</div><div>-rw-rw-r--</div><div>-rwx-----</div></div><div>1611</div></div>		john	john	576	Apr 17 1998	weather.txt
		john	john	1024	Oct 9 1999	web_page
		john	john	276480	Feb 11 20:41	web_site.tar
		john	john	5743	Dec 16 1998	my_app
permission	owner	file size (in bytes)			file name	

- File permission
  - First character: '-' regular file; 'd' directory
  - Next three: read, write, execution permission of the owner
  - Next three: read, write, execution permission of the group
  - Final three: read, write, execution permission of everyone else

# Manipulating Files/Directories

- Create directories: **mkdir** dir
- Delete directories: **rmdir** dir
  - Can only remove **empty** directory
- Create an empty file: **touch** file

# Copy Files/Directories

- Basic command: `cp source dest`
- Variations
  - `cp file1 file2`: copy the content of file1 into file2
  - `cp file1 dir`: copy file into a directory
    - `cp file1 file2 dir`
    - `cp file* dir`
      - \*: wildcard. Can represent any character string (even an empty string!)
  - `cp -r dir1 dir2`: If dir2 does not exist, copy dir1 as dir2. If dir2 exists, copy dir1 inside dir2

Which Commands List **ALL** and Only ALL Files with the xyz Extension in Current Folder?

Assume no hidden files. Select all the correct answers.

- A. `ls ./*xyz`
- B. `ls *.xyz`
- C. `ls *xyz`
- D. None of the above.

# Rename/Move a File

- Basic command: **mv** source dest
- Variations
  - **mv** file1 file2: rename file1 as file2
  - **mv** file1 dir: move file into a directory
  - **mv** dir1 dir2: If dir2 does not exist, then rename dir1 as dir2. If dir2 exists, then move dir1 inside dir2

# Delete Files/Directories

- Basic command: `rm file`
- Variations
  - `rm file`: delete file
  - `rm file1 file2`: delete file1 and file2
  - `rm -r dir`: delete dir along with its contents
- Useful options `-i`: prompt before every removal
  - To use: alias `rm='rm -i'`;
  - Put it into `~/.bashrc`

# Edit/Show a File

- Edit file: `nano file`      `gedit file`
  - advanced editor: vim, emacs
- Show file content
  - `cat file`
  - `less file`
    - quit 'less': press 'q'
    - go to the end: press 'G' (shift + g)
    - go to the beginning: press 'g'
    - search: press '/', then enter the thing to be searched
    - press 'n' for the next match; press 'N' for the previous match.

# I/O Redirection

- Most command line programs display their results on the **standard output**.
  - By default, standard output is our display.
- We can redirect from standard output to a file by using '>'.
  - E.g., `ls -l > ls_rst.txt`: the “ls” result is now in `ls_rst.txt`

# I/O Redirection

- Many commands can accept input from a facility called **standard input**.
  - By default, standard input is our keyboard.
- We can redirect standard input from a file instead of keyboard by using '<'.
  - One application: testing
  - E.g., `my_add < input.txt`  
# my\_add is a program taking two inputs from keyboard and output their sum on screen

# What does the Following Command Do?

```
sort < fruit.txt > my_favorite.txt
```

Select all the correct answers.

- **A.** The command reads fruit.txt and my\_favorite.txt
- **B.** The command reads fruit.txt and writes in my\_favorite.txt
- **C.** The elements of fruit.txt are in alphabetic order
- **D.** The elements of my\_favorite.txt are in alphabetic order

# Other Commands

- Auto completion: type a few characters; then press ‘Tab’
  - If there is a single match, Linux completes the remaining.
  - If there are multiple matches, hit the second time, Linux shows all the possible candidates.
- Compare two files: `diff file1 file2`
  - If files are the same, no output
  - If there are differences: lines after “<” are from the first file; lines after “>” are from the second file
  - In a summary line: ‘c’: change; ‘a’: add; ‘d’: delete
  - Useful option “-w”: ignore white spaces (space, tab)

# Other Commands

- Install a program: `sudo apt-get install program`
  - E.g., `sudo apt-get install emacs`
  - `sudo command`: execute command as a superuser
    - Requires you to type your password
- Remove a program: `sudo apt-get autoremove program`
- Looking for help? `man command` e.g., `man ls`
  - Browse the manual using the same commands as for 'less'
